Web Technologies / PHP

Practice

Objectives:

The purpose of this exercise is to implement the following concepts

- -The use of the POST method and global array **\$_POST[]**.
- -Sending and retrieving data.
- -The data validation and sanitize process by developing specific functions or by using predefined functions in PHP, PHP filters and regular expressions (preg_match()).

Envoyer

Work to do:

- 1. Improve the calcul.php script in such a way as to make it reflexive and display the form and the data on the same page.
 - a. The form must keep the values entered in the fields.
 - b. The validation process must be done in two ways:
 - i. The use of regular expressions according to the component.
 - ii. The use of functions that allow to validate data of each field and grouped in a external file (functions.php). (included in the calcul.php file).

The exercise must be functional for the next lab.
